To whom it may concern in Enfield council,

I am emailing you because I am incredibly upset and absolutely furious beyond words can describe about the disgraceful proposed plans to build on the stunning greenbelt land unique to Enfield you have drawn up. I am so furious that it's affected my sleep and ability to function at work in the day subsequently. This may sound ridiculous to you, but I care so deeply about protecting green space in the borough and am completely against building further houses to promote the increase of an already densely populated borough as it is.

I just cannot understand how you think the solution to providing housing for people is to build on the greenbelt land we need to protect and has been protected for a reason. What about wildlife, peace, lack of pollution, the allowance of rain water to drain away?

Why don't you build on the brownfield sites that already exist around Meridian water, for example? My strong fear is you will ruin the quality of nice areas we have in the long term, including Cruise Hill and Oakwood. Once they are ruined/become deprived it will be hard to get back the beauty. These areas are nice because of the green land around them.

If housing is also an issue maybe the problem is you allowing so many people to live in the borough especially if they have not grown up within it. I appreciate houses need building but housing should really be being built outside of London. The city is already overwhelming densely populated for the worse.

By the way, flooding over this weekend just gone is a perfect example of just one of the unintended consequences of overbuilding.

Please re - think your decision. There are thousands upon thousands of Enfield residents who are extremely unhappy with these plans (to say the least I'm sure). This is not the sensible way forward ! Even your own Labour led mayor objected to the plans !

Please read and process my email. I am an Enfield resident and do not want you as a council ruining the nice parts of the borough we have left !

Kind regards
