

**Policy SP PL9 pages 77-80 and Concept Plan Figure 3.10**

This area which at present houses Garden Nurseries is of great importance to the community in serving us with supplies and information for our gardens which provide the community with great enjoyment and therapeutic influences at this and future times of disruption to life. Not to mention the added advantage of assisting to combat the CO2 emissions. This goes for the garden centres and our own gardens. This in turn will prevent our gardens from being paved or laid with artificial grass. Leaving more area for rain drainage. Brown sites before green.

**Policy SA62 page 383 & sp cl4 pages 277-279**

This was a golf course which was available to all. Again space which was rich in natural grass to be proposed to change the use for football available to limited people in the community and to house artificial surfaces is not in keeping with combatting of CO2 emissions. The same goes of course for the drainage to prevent flooding. From Whitewebbs stretching to Forty Hall is a lovely woody environment for dog walkers and strollers providing socialising for the whole community. Brown sites before green.

**Policy SP PL 10, pages 80-87 and Figure 3.11**

I feel we do not need houses to buy but houses to rent. If these builds are again going to be for 'luxury' flats as is already the case in Trent Park, the cheapest being 1.4 million, then we should look again at the needs of the community! Brown sites before green.

I ask you to please consider the feedback you are getting from the community as we and our children will want to have a healthy and socially balanced community for our future. There are alternatives - brown sites before green.
