

I am writing to object to the following Policies: SP PL10, pages 80-87, and Figure 3.11; Policy SP PL9, pages 77-80 and Concept Plan Figure 3.10; Policy SA45: Land Between Camlet Way and Crescent Way, Hadley Wood, page 364; Policy SA54, page 374; and Policy SA62 page 383 and SP CL4 pages 277-279 – all of which propose the dedesignation of Green Belt for housing and other purposes. These sites are part of historic Enfield Chase, which is unique in the southeast and played an important role in the development of Enfield. It is a rare and valuable landscape asset and its loss would cause permanent harm not only to the Green Belt, but also to the very character of the borough. As a long term resident of Enfield with two very young daughters I have seen too much of its historic charm and character lost to redevelopments that ruin the environmental landscape of our lovely borough, to lose the green space and all of its biodiversity would be devastating, at a time when we need to consider how important green space is to manage flooding and is a natural barrier against climate change it is our duty to do this!

I am also objecting to Policy SA52 page 372, which would remove part of Rammey Marsh, a wildlife area and public amenity, from the Green Belt.

I am also objecting to the tall building policies on pages 156-160, Figure 7.3, Figure 7.4 and Policy DE6, and SA2 Palace Gardens Shopping Centre page 321 which propose areas for and the acceptable height of tall buildings which, in many cases would mar the landscape and are unnecessary because other lower-rise building forms could provide the same accommodation, as stated in the policy.

Enfield RoadWatch, The Enfield Society and CPRE London have conducted a detailed survey of the entire Borough of Enfield, ward by ward, to establish a list of sites which could provide space to build. These are sites which currently make poor use of space and which could be intensified and put to better use. These range from some very large sites to hundreds of 'micro' sites. Please utilise studies like this where people have the best interests of providing homes for the future populations but enabling us to retain our environment for future generations. We have a duty to retain our green spaces for all generations to enjoy!
